Project Proposal for Misunderstood World

Organisation Overview:

Misunderstood World is a streetwear brand birthed in the streets of Cape Town in the 2000s for people who always felt like outsiders to the world we all live in, founded by two boys from the cape flats with the mission to bring about confidence within those who always felt left out and a strong vision to empower the silent faces of the youth to elevate.

Website Goals and Objectives:

The website will be designed with the intention to bring about awareness for street culture and street wear and sell clothing designed for fashionists. Key performance areas entail how social media engagement will be done and how sales will be handled.

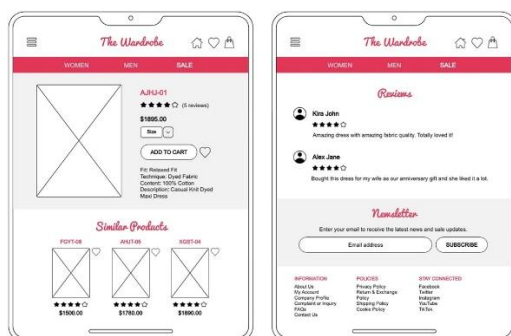

Proposed Website Features and Functionality:

Essential features of the website include a homepage, about us, contact page, products page, with a wish list for items that a user would want to save. Other features include a category list for the different types of clothing pieces and a history page that overlays the whole story behind the brand.

Design and User Experience:

The overall design aesthetic and branding is a simple street design with a white and blue shades colour scheme involving a typography with font choices such as Aerosoldier and Funkydori/Groovy style. The layout and design will follow the typical useful bait layout with the UX design wireframe that will allow exploration of UX concepts without committing to final design details. The following image will serve as an example to our design:

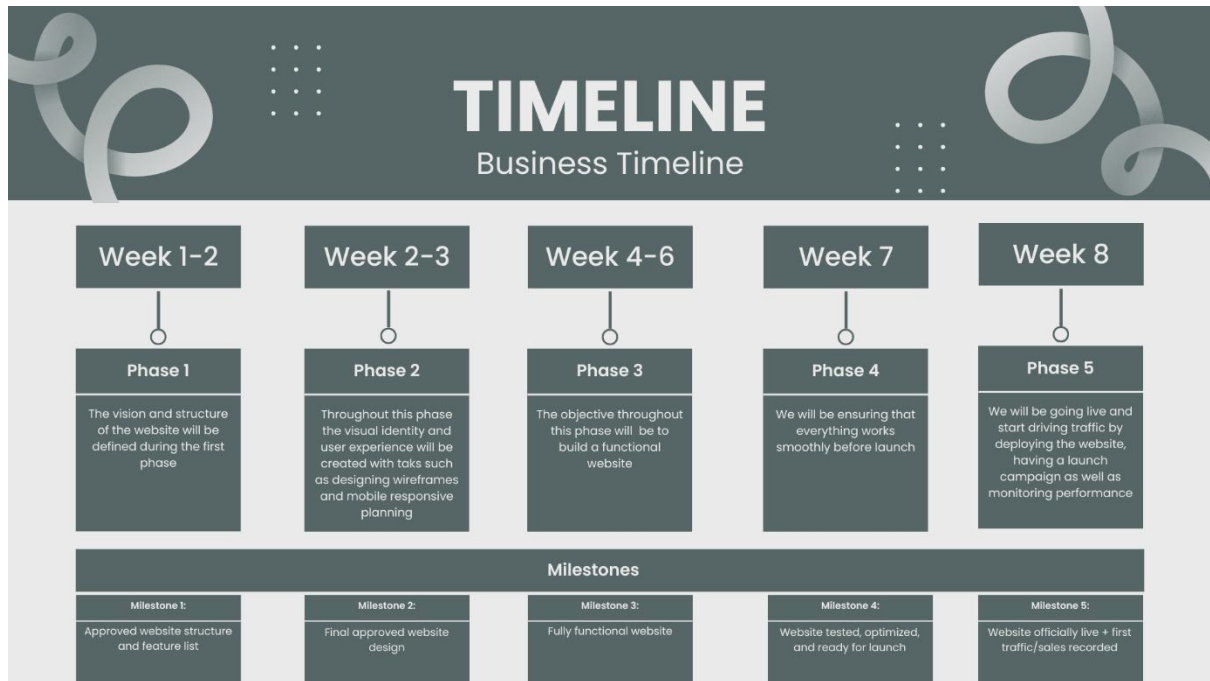

Fashion Store Website
WIREFRAME

Technical Requirements:

Technical Requirements will include the use of languages such as HTML, JavaScript and CSS. Websites and tools such as vercel.com and GitHub will be used to deploy our website to the internet. cPanel will be used to host our final website. A domain name will be purchased and run through on GoDaddy.com.

Timelines and Milestones:

Budget:

1. Planning and Strategy

Item	Cost
Market research and Planning	R2,000
Sitemap and feature planning	R1,000
Subtotal	R 3,000

2. Design

Item	Cost
Wireframes	R2,000
Full website design	R5,000
Subtotal	R 7,000

3. Development

Item	Cost
Website development (front-end + back-end)	R10,000
E-commerce functionality	R4,000

Payment gateway integration	R2,000
Subtotal	R 16,000

4. Testing and Optimisation

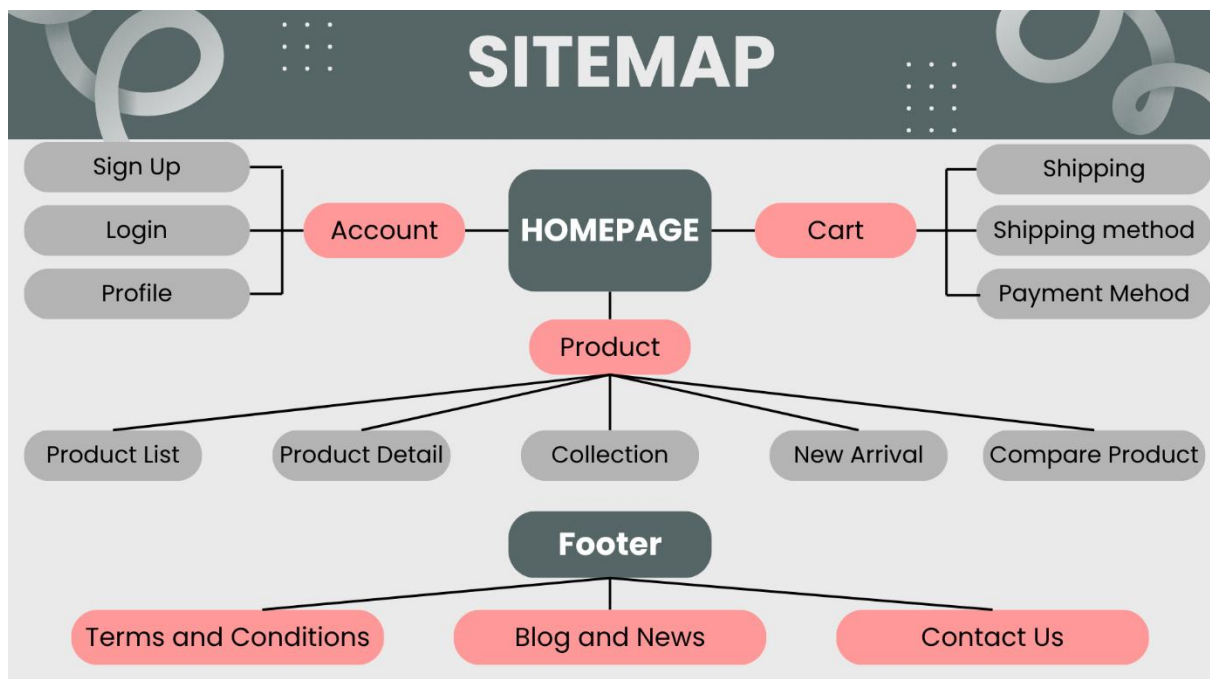

Item	Cost
Website testing	R1,500
SEO setup	R2,000
Subtotal	R 3,500

5. Ongoing Monthly Costs

Item	Cost
Hosting and domain	R150 – R500
Platform subscription	R500 – R1,200
Subtotal	R 650 -R1,700

Total: ±31,200

Project Proposal for Two Oceans Aquarium Trust

Organisation Overview:

The Two Oceans Aquarium trust is a non-profit organisation and public benefit organisation that was established in 2019 with the vision for abundant and healthy oceans for life and the mission to inform and inspire all to connect with and protect our ocean and ocean-vulnerable communities through conservation, awareness and research, and education. This organisation targets the South African public, particularly children and young adults, to promote ocean conservation and marine science literacy.

Website Goals and Objectives:

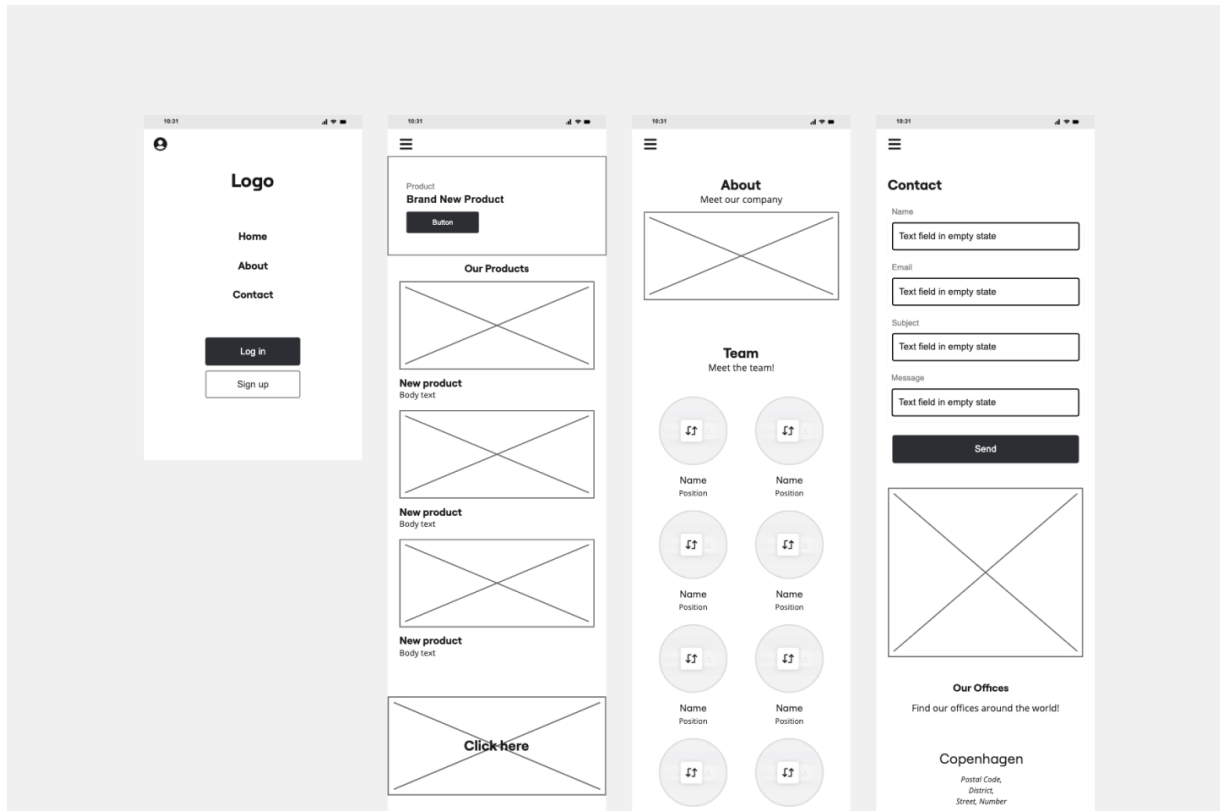

The primary goal of the aquarium website is to serve as an engaging, informative, and user-friendly platform that attracts visitors, promotes marine conservation awareness, and increases overall attendance and revenue. The website aims to provide clear and accessible information about exhibits, ticket pricing, operating hours, and special events, while also offering seamless online booking to improve convenience for users. The key objective would be to promote education and conservation by sharing valuable content about marine life, ecosystems, and ongoing initiatives, while also encouraging user engagement through social media integration, newsletters, and regularly updated content. The website will further support revenue growth by enabling online purchases of tickets, memberships, merchandise, and exclusive experiences, as well as highlighting donation opportunities. Success will be measured using key performance indicators such as website traffic, user engagement (including session duration and bounce rate), conversion rates for ticket sales and sign-ups, online revenue, and user satisfaction, with targets focused on steady traffic growth, increased conversions, and improved overall engagement.

Proposed Website Features and Functionality:

Essential features of the website will include a clear and easy to use navigation structure that allows users to easily access key information. The website will also include an online booking system to enable quick and secure ticket purchases across all devices. The website will also incorporate engaging elements such as image galleries. Educational content, including images, videos and resources about marine life and conservation should be readily available to support learning and awareness. Inclusion of a donations page to support conservation efforts will be made available as well as location details, maps, and inquiry forms.

Design and User Experience:

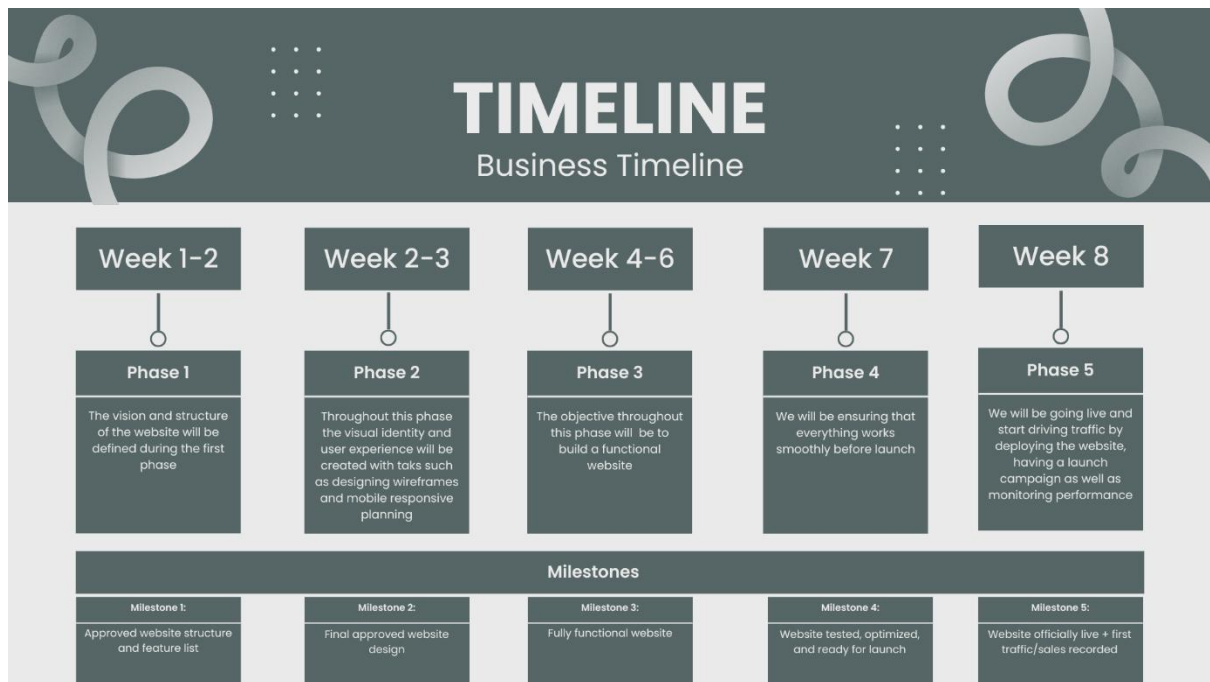

The overall design aesthetic and branding is a simple oceanic design with a white and blue shades colour scheme involving a typography with font choices such as Aerial, Blue Ocean, Mermaid Bubble, Ocean Drive, etc. The layout and design will follow the typical useful bait layout with the UX design wireframe that will allow exploration of UX concepts without committing to final design details. The following image will serve as an example to our design:

Technical Requirements:

Technical Requirements will include the use of languages such as HTML, JavaScript and CSS. Websites and tools such as vercel.com and GitHub will be used to deploy our website to the internet. cPanel will be used to host our final website. A domain name will be purchased and run through on GoDaddy.com.

Timelines and Milestones:

Budget:
